

Substitute Specification

ABSTRACT OF THE DISCLOSURE

The inventive device for collecting, looking up, and processing data, in particular medical data, includes at least one mobile computer medium for recording data, the reader/writer and, if necessary, at least one fixed computer medium for data recording. The mobile and fixed computer media are embodied in such a way that they remotely communicate with each other by the reader-writer, through a communication network, like the Internet. The mobile computer medium includes a reading/writing mechanism which makes it possible to simultaneously read data recorded thereon, and write new data, while performing entirely from the mobile medium.
